

Smart Hospital & Doctor Finder

Description

Smart Hospital & Doctor Finder is a healthcare website designed using HTML and CSS to help users find suitable doctors and nearby hospitals. It provides doctor information, ratings, specializations, disease-based recommendations, and a simple interface for viewing essential patient details.

Synopsis

Smart Hospital & Doctor Finder is a healthcare web interface that helps users easily search for doctors and hospitals based on their needs. It includes features such as doctor ratings, specialization, experience, disease-based doctor suggestions, nearby hospital information, and patient details such as age, blood group, and medical records. The project focuses on creating a simple, user-friendly, and informative healthcare platform.

Key Features

- Doctor Finder
- Hospital Finder
- Doctor Ratings & Reviews
- Disease-Based Doctor Search
- Doctor Specialization & Experience
- Nearby Hospital Information
- Patient Information
- Medical Records Interface
- User-Friendly Design

Technologies Used

- HTML5
- CSS3

Project Objective

To create a simple and attractive healthcare website that makes it easier for users to find suitable doctors, hospitals, and essential healthcare information in one place.

Outcomes

- Created a simple healthcare website.
- Made doctor and hospital information easily accessible.
- Added doctor ratings, specializations, and experience.
- Included patient information and medical records.
- Improved practical knowledge of HTML and CSS.

Conclusion

The Smart Hospital & Doctor Finder project provides a simple and attractive platform for accessing healthcare information. It makes finding doctors and hospitals easier and can be further improved by adding online appointments, databases, GPS, and real-time services.
